

SPORTEX
— GERMANY —

2026

It's 4:37 AM.

The alarm clock? Useless. You've been awake for a while. Not out of duty—but out of passion. Outside, the world is still asleep. Not a breeze stirs. Mist floats like a veil over the water's surface. No sound. Just your breath. And the rhythm in your head: Spot. Bait. Knot. Quiet. Precise.

You don't just go fishing—you feel it.

Every step, every choice is part of your inner rhythm. You're fully in the moment.

Alert. Ready. Your primal trust guides you. You don't doubt. You just know. You stick with it. Always. Rain, wind, darkness, hours of waiting—you're there. Because average isn't your thing. Because you look where others turn away. Because you see what others miss.

That's exactly why we build our rods—for you.

Not for the masses. But for those who expect more. For those who balance power and sensitivity. For those who value precision—and trust their intuition.

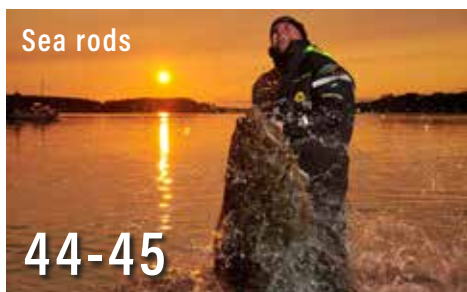

Our rods aren't just tools. They're a promise:

Of performance. Of reliability. Of what truly matters when everything else fades away. So you can find your rhythm—your primal trust. And we're with you—all the way. To the limit.

Because of you.

Thanks for taking us with you.

SPORTEX.

Aramid and graphene fibers are among the most innovative high-performance materials used in rod construction. Aramid (e.g., Kevlar®) is used for reinforcement and provides extreme tensile strength and impact resistance—ideal for durable, resilient blanks. Graphene, on the other hand, makes rods significantly lighter, stiffer, and more sensitive without compromising stability. When combined, both materials offer maximum performance, control, and safety – even under the toughest conditions.

High modulus carbon refers to carbon fibers with an increased modulus of elasticity. These fibers enable particularly stiff and lightweight blanks with low wall thickness, high resilience, and direct bite transmission – ideal for modern, performance-oriented rod designs.

T800 is a high-quality carbon fiber from Toray with a high modulus of elasticity. It offers a perfect balance of stiffness, lightness, and impact resistance. In fishing rods, T800 ensures sensitive, robust, yet flexible blanks – ideal for versatile fishing techniques.

Toray T1100G is one of the highest-quality carbon fibers in the world, known for its extreme stiffness, high recovery speed, and good impact resistance. This high-end fiber enables ultra-light, extremely sensitive, and yet resilient fishing rods – ideal for professional anglers who want maximum performance.

M40X high-modulus carbon is the latest generation from market leader Toray. Extremely stiff, lightweight, and impact-resistant, it is ideal for fast, sensitive rods with high rebound speed and stability. More feel, more casting distance, more safety—with less weight.

Rod action

Extra Fast

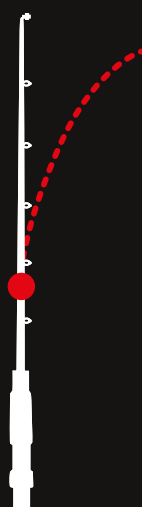

Fast

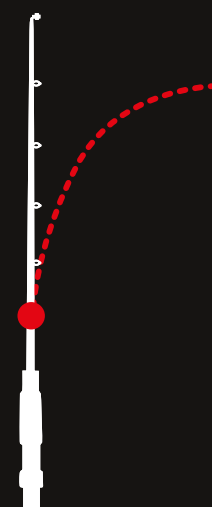

Medium Fast

Medium

Slow Medium

Slow

Extra Fast:

the blank primarily flexes in the upper third of the tip section. Further down the blank features a strong backbone.

- Sensitive bite detection
- Powerful and long distance casting

Fast:

the entire tip section of the blank flexes. The butt section offers a strong backbone.

- Sensitive bite detection
- Powerful and long distance casting

Medium Fast:

the rod flexes from its tip nearly down to the middle of the blank. The butt section offers a strong backbone

- controlled hook setting even on longer distance
- large distance casting possible

Medium:

the rod flexes from its tip all the way down to the middle of the blank. The butt section offers a strong backbone.

- controlled hook setting even on longer distance
- large distance casting possible

Slow Medium:

the blank flexes from its tip all the way down to just about the handle section.

- very healthy balance of power and best for fighting large fish
- excellent shock absorption even in close-up range

Slow:

the entire blank evenly flexes from its tip down to the handle and is quite soft.

- very healthy balance of power and best for fighting large fish
- excellent shock absorption even in close-up range

GRAPHENON RS-2

Experience the next generation of fishing with our Graphenon RS-2 rod series - perfect for ambitious predator anglers looking for top performance and exceptional design.

The super lightweight and extremely durable Helicore blank made from the finest M40X and T1100 carbon combines revolutionary materials for unrivalled stability and durability at a low weight. The Medium Fast+ action ensures first-class casting characteristics and precise bite transmission so that you can savour every moment on the water to the full.

The progressive power development of the blank ensures constant power during the fight, allowing you to handle even hard-fighting fish with confidence at all

times. The rod is equipped with slim original FUJI KW / KL / KT SIC guides, which allow the line to glide perfectly through the guides and ensure optimum heat dissipation.

The innovative, extremely lightweight, one-piece monocoque carbon handle with reel seat not only offers an extremely stylish look, but also has an extremely high conductivity, so that you can feel even the finest bites immediately in your hand.

This spinning rod is more than just a tool - it is a statement of quality and performance. Let yourself be inspired and turn every fishing trip into an extraordinary experience!

ABSOLUT LEVEL 3

The Absolut series is back and better than ever before. Engineered to epitomise angling excellence, the RS-3 version boasts our exceptional Helicore blank, meticulously woven from T-1100 carbon fibres and enriched with a bespoke epoxy resin. This marriage of materials guarantees extraordinary casting acceleration and a decisive strike impact. Tailored to modern predator fishing's demands, the Absolut Level3 series has the range required for all your angling ambitions. From soft plastics to enticing wobblers, spinnerbaits and beyond, the Absolut Level3 seamlessly integrates with every type of lure. The new Pelagic model, featuring an extended handle section,

and the Sharpshooter model tailored for LiveScope fishing, constitute the pinnacle of precision. Achieving remarkable accuracy, these rods lock onto their targets with unparalleled tautness, ensuring a rock-steady hookset during the critical moments of any fight. These are the ultimate weapons when it comes to tackling big pike and zander. Fittings: Wear-resistant SIC guides in KL / KT style, FUJI TVS or ACS (Baitcast) reel seats and tough EVA Duplon split handles. Available in lengths from 7ft. to 8,7ft. and casting weights from 3g to 125g, these are absolute must-haves.

REVOLT RS-2

Modern spinning fishing on a new level: with the SPORTEX Revolt RS-2 you get a rod that delivers power, precision and style to the point. At its core is our distinctive heptacore blank in a seven-sided design made from high-quality T800 carbon by Toray. This construction ensures particularly fast recovery, high casting speeds, and ultra-precise lure control. This lets you place your lure exactly where it needs to go and feel every bite directly in your hand.

Depending on the model, the Revolt RS-2 is equipped with a painted FUJI VSS (Spin) or TVS reel seat (Seatrout), combined with high-quality KW / KL / KT SIC guides in a long-cast setup and a comfortable, stylish split EVA handle. And when it matters, the thoughtfully tuned blank provides plenty of power for secure hooksets and thrilling fights – whether you're at the river, lake, or coast.

Conclusion: Technology, performance and style – this rod shows how much power is packed into a top-class spinning rod.

Here's the missing piece of the puzzle for all those pike and perch anglers who set their standards high. Anyone looking for the ultimate weapon for taking on predators need look no further; these exceptional rods are the ultimate answer! At the heart of the rod is our super fast and super tough Helicore blank made of T1100 carbon fibres and special epoxy resin. Thanks to their unique combination of FUJI titanium guides, carbon reel seats and carbon grips, Nobun Spin models are extremely light and fit perfectly in the hand. The extra fast action gives that touch of seductive life to every lure and creates a direct connection with the fish. Whether it's jigging, vertical or lazy (sometimes called sink and draw) fishing, the slightest movement or touch of the lure can be felt from the tip right into the handle. And that means you're the master of the situation, at all times. This power set-up is rounded off by a stellar casting and playing performance, which makes for a spectacular fishing experience every time and everywhere.

The Sportex BEYOND RS-2 once again sets new standards in terms of rod technology and design. It is a real powerhouse for predator anglers! The innovative, heptacore blank made from the best T1100 carbon fibres ensures impressive performance and exceptional bite detection. With its 'extra fast' action, powerful backbone and sensitive tip, it offers you maximum precision and control, whether casting, hooking or drilling. Casting accuracy is maximised by the slim and extra-light SEAGUIDE Titanium SIC guides, while the stylish FUJI TVS reel seat and high-quality, braided carbon split handles* ensure comfort and a classy look.

This rod is not only an eye-catcher, but also a reliable partner on the water at all times.

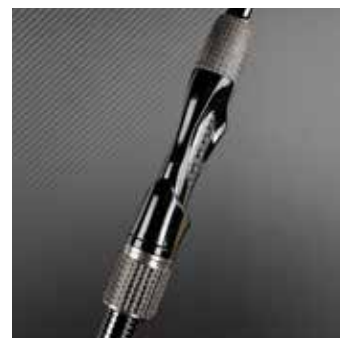

If you are looking for a rod that excites with every cast, fulfils the highest demands and offers reliability, the BEYOND RS-2 is the perfect choice for you. With it you will experience fishing on a new level!

TIBORON RS-3

Traditional qualities and innovative design all in one: when we came to review these well-loved spinning rods, there was no compromising on high-end materials. We treated this already successful series to an upgrade with our high-performance Helicore blank made of T1100 carbon fibre. For an inspirational surface finish, a modified version of the fishscale technology came into play, found in our AIR Spin RS-2 models. The handle section above the FUJI VSS reel seat is also made of tough lightweight 3K carbon. The action of the Tiboron RS-3 has deliberately been made somewhat stiffer than before, so as to meet the demands of modern lure fishing. And the rods are of course ideally suited for everyone who wants to get specimen pike and perch on the line with hard baits, spoons, spinners and the like.

AIR SPIN RS-2

Fantastic loading, excellent resetting capacity and unique sensitivity. Anyone who experiences this superb spinning rod in action immediately feels its inherent potential. The newly-developed lightweight Helicore blank made of T1100 carbon fibres and special epoxy resin with innovative nanoparticles makes for maximum agility and stability. Then there's the high-end fittings, including slim FUJI TORZITE guides, specially designed reel seats and high-quality natural cork or Duplon handles. In addition, the handle section contains the tried, trusted and perfected SBS (SPORTEX Balance System), with three different inter-changeable weights. This means the rod

always sits perfectly balanced in the hand for long periods without strain or stress. And the innovative 'Fishscale' blank finish is a treat to see and feel. In short, an absolute dream for hardcore spinning anglers who place particular value on long, accurate casts.

QUICKTIPS ZANDERSTART

The hottest time of the year is approaching. Not just in terms of temperature, but especially with regard to the light-shy spiny predators. The need for food after spawning is high. At the same time, zander are generally warm-loving fish that become highly active in early summer. Anyone who now pays attention to a few things and makes the right decisions will be rewarded with aggressive bites and beautiful fish.

Current, Shade & Stones

Oxygen levels and sunlight now largely determine the holding spots of our target fish. In principle, they can — especially in murky water or overcast weather — feed and be catchable throughout the day. In such cases, shallower, near-shore areas are often promising, especially in combination with stones and other structures. However, if the water is clear and low, the glass-eyed fish usually retreat to light-protected areas with a hard bottom and stronger current, where they rest on the bottom until dusk.

Knock Knock

The metabolism is running at full speed. Although zander are generally considered more cautious and slow predators compared to others, one should not shy away from presenting the lure with sharp movements, especially at the start of the season. Shorter sinking phases and a hard impact of the jighead often trigger not only active but also passive fish. Especially over rocky bottoms (where zander already like to hang out), the loud tapping of the jighead can work wonders. At the same time, you cover more ground quickly and increase the chances of encountering active fish.

The Right Rod

Especially in large rivers, zander (during low and normal water levels) often stay further out during the day near current edges and eroded areas. For us, this means long casts and heavier jigheads. All the more important are optimal bite detection and hook setting. An extremely sensitive yet powerful blank is essential. Our new Carat GTS-2 Spin combines these features and, thanks to its Helicore T1100 blank in combination with the full-carbon monocoque handle, transmits even the smallest impulse all the way into the handle. At the same time, the rod offers extreme power reserves during the fight, as well as enough cushioning to safely guide even large fish out of strong currents.

Discover the top class of predator rods with our new, light and powerful CARAT GTS-2, which is equipped with our Helicore blank made of T1100 carbon. The 'fast' action gives the rod exceptional casting dynamics and very fast recovery. Thanks to the excellent sensitivity in the tip area, you are able to perceive every action under water immediately and can therefore return every bite with a quick strike. This rod is also characterised by its first-class damping properties, giving you optimum control and precision during the fight.

To guarantee maximum casting distance and perfect line control, we have equipped the Carat GTS-2 with SEAGUIDE XOG / XQG / XOG-W SIC guides. The innovative, extremely lightweight, one-piece monocoque carbon handle with reel seat not only offers a stylish design, but also has extremely high conductivity so that you never miss a bite again. With this rod, you can master any challenge on the water with absolute ease!

HYDRA RS-3

TORAYCA

Fuji reel seat
VSS / ACS

D-Hook hook eye

This series delivers exactly what modern predator fishing is all about: uncompromising power, pinpoint precision, and a fine sense for detail.

The newly developed blank made from ultra-light, powerful T800 carbon from Toray impresses with extremely fast recovery, direct feedback, and solid power reserves. Whether soft lures, jigs, or hardbaits – the rod action is specifically tuned for versatile predator techniques and offers you maximum performance with every cast, hookset, and fight. The modern carbon mesh in the handle section is more than just a stylish eye-catcher: it gives the rod its sporty-dynamic look and provides added stability and durability without compromise. Modern Seaguide guides (XQG, XOG, XOG-W) enable optimal and precise casting performance with minimal friction resistance. The sturdy FUJI reel seat (TVS or ACS, depending on the model) stays rock solid, even under full load.

The setup is rounded off by a full-length EVA rear grip with a sporty shape and secure grip for comfortable handling, even during long sessions.

Whether from shore or boat, light jigging or powerful twitching – these rods take you to your target with fast responsiveness and powerful action at all times.

ILLUSION

Introducing an exceptional line-up of rods designed to bring specialised expertise within reach of every angler. With an impressive array of tailored rods, the Illusion series redefines the way you approach predator fishing. Engineered with specially adapted lengths and casting weights, these rods offer impeccable handling, setting the stage for exhilarating encounters. Each blank boasts Japanese high-performance carbon, ensuring an extra fast rod action enriched with the perfect blend of

power and finesse. This makes for outstanding casting performance, as well as for extraordinary reserves of strength when it comes to playing the fish. The Illusion series boasts everything you need to reel in pike, zander, perch and more with complete success. The Sharpshooter model IL2202 is also ideally suited for LiveScope fishing, while the IL1950 also has a Pelagic model with an extra long handle section. The rods are fitted with KW / KL / KT style SIC guides, TVS or ACS style reel seats and tough Camou EVA Duplon split handles.

BLACK PEARL MAXX

The Black Pearl is an evergreen which has been in the SPORTEX range for decades and is still enjoying huge popularity today. And with the MAXX version the legend enters a new chapter. This series is a winner, with fast, lightweight rods made of hard-wearing Japanese high-performance carbon. It is a broad range of rods which are suitable for all-round use as well as for specialised ultra-light or jig fishing. There is also the choice of three travel models in different lengths for holiday trips. And thanks to the special rod guides, the BP2263 model is also well-suited for use in saltwater. If you are looking for reliable rods with a good price-performance ratio, then the Black Pearl MAXX is just what you need. Fittings: KW / KL / KT style SIC guides, TVS or ACS style reel seats and tough EVA Duplon split handles.

KEV NITRO RS-2

In recent years, the development of high-quality aramide fibres has sparked a revolution in rod construction. These fibres possess unparalleled attributes – extreme tensile strength, lightweight design and resistance to heat – making them the perfect building blocks for superior fishing rods. And now, thanks to the innovative combination of Japanese high-performance carbon and special aramide fibres, we are in a position to create a blank which combines a high loading limit and tremendous speed strength. And the results are unequivocally convincing for all predator

anglers. Imagine the thrill of engaging in a battle with a truly massive fish. The Kev-Nitro RS-2 offers the safety and resilience required when you are faced with a true titan of the water. This rod's progressive power distribution ensures that you are equipped for every twist and turn that the fight brings. The Kev-Nitro is ideally suited for the pursuit of zander and pike, with all conventional lures. And naturally the rod fittings meet all the demands of a modern SPORTEX rod, with SIC guides from Seaguide, FUJI TVS reel seats, and a slim and robust single Duplon handle.

NEOWAVE RS-2

Slim, light, fast and with extreme sensitivity – these highly prized characteristics of the old Neowave have been replicated in the RS-2 version. Much of this is thanks to our Helicore blank, created from T1100 carbon fibres and the new epoxy resin, which makes the slim, lightweight blank even less affected by outside jolts and shocks. Other highlights are the extra light titanium guides, which help to further intensify any generated speed. With the matched medium fast action, trout, perch and similar species swiftly meet their match when you start playing – aided still further by

the strengthened handle section which has been given extra power thanks to the new 3DX-2 carbon mesh used in its construction. Other high-quality fittings include a FUJI TVS reel seat and tough EVA handles.

NOVA RS-3 NEW

With this rod series, you get everything you need for modern, varied perch fishing. From sensitive UL models to precise jig rods and clever all-rounders or specialized dropshot versions – whether using softbaits, twitchbaits, or small cranks. The slim blank made from high-quality Toray High Performance Carbon offers direct feedback, fast action, and solid backbone strength – just what you need when things get serious. The action is specifically tuned to the technique, making all the difference. You feel the lure, detect the bite, and strike with pinpoint accuracy.

Whether VSS or baitcast reel seat: depending on the model, you get the right setup for your fishing style. The lightweight KL / KT SIC guides ensure smooth line flow, long casts, and trouble-free use even with fine braided lines. The rod action is tailored specifically to the demands of perch fishing – sensitive in the tip, with enough backbone for confident strikes and secure fights. You want full control, precise feedback, and uncompromising performance? Then this is your new perch rod – at a price that's hard to beat.

CURVE RS-3 NEW

Direct feedback, precise casts, and perfectly matched handling – this series gives you the complete package for modern perch and zander fishing. The finely tuned blank made from Japanese high-performance carbon by Toray provides direct feedback and full lure control. Whether jigging for zander or twitching for perch, the action is perfectly matched to the target species. The zander models feature more backbone power for clean hooksets.

The perch versions score with a sensitive tip and fine action for maximum lure control. KL and KT SIC guides support long, precise casts with smooth line flow. A stylish split EVA rear handle not only looks good but also provides a secure and comfortable hold when casting. Conclusion: Technically advanced and sporty in design, these rods are made for anglers who know what they want.

Produced with predator fans in mind. Following on from the outstanding success of our Rapid coarse rods, we now want to give all ambitious spin anglers the opportunity to enjoy the pleasures of this inspirational and powerful all-rounder. The top-flight blank, made of Japanese high-modular carbon, has a stiff tip action, and has sufficient power reserves for reliably landing big fish. Adding to that, our cool fish camo design makes the Rapid Spin a visual winner too.

And for natural bait enthusiasts we have developed special deadbait versions with casting properties that are pure genius thanks to the way they carry even chunky mouthfuls over great distances. As well as that, this special model has extra large SIC guides for using heavier lines or knots – and for good fishing even at colder times of the year, without any problems with ice.

FAST
ACTION

Here is the complete rod for the ambitious spinning angler – with a touch of genius. When we developed the new Genium Spin series, our aim was to provide a spinning rod that was extremely thin, fast and tough. The result is a precision design that makes the pursuit of predator fish with wobblers, soft baits, blinkers or spinners a pure pleasure. The featherweight blank, made of top quality Japanese high-performance carbon, has a fast, semi-parabolic action and excellent loading characteristics that make it a gem to use.

Add to that, impressive casting capacities and immense reserves of power in the backbone, as well as outstandingly good damping ability and extraordinarily high sensitivity, and this rod has everything you could wish for when it comes to guiding the bait and sensing a bite. The technical and visual highlights include an ergonomically-shaped 3K split carbon handle and newly developed, extremely light, high-end carbon guides. All models come fitted with a super robust Seaguide XSS reel seat and the innovative Seaguide 'D-Hook' hook keeper.

BLACK ARROW G4

Unleash your fishing potential with our state-of-the-art 4th generation 'Black Arrow'. The lightweight and powerful Helicore blank made of T800 carbon offers outstanding fishing fun and reliability.

The 'fast' action of the blank is ideal for use with hard and softbaits and ensures precise lure control and outstanding reaction speed. Due to its impressive speed and excellent casting properties, this series once again provides an aha effect in terms of casting accuracy and range. The rods are equipped with slim SEAGUIDE SIC guides, a 'grippy' ergonomic EVA 'split' rear handle with an aluminium end cap. In addition, the lacquered FUJI TVS reel seat or the ACS reel seat on baitcast models and the heavy bigbait musky models ensure a secure hold of the reel and a consistent, stylish design.

The two 'Street' models also have a telescopic rear handle, which provides ad-

ditional flexibility when adjusting the length.

This predator rod series combines state-of-the-art technology with outstanding design.

MAGNIFIC FINESSE RS-2

The ultra-light helicore blank of the new Magnific series made from high-end T1100 carbon is light as a feather in your hand and at the same time offers impressive power and casting accuracy.

Fast action for light lures: The action of these rods is perfectly tuned for fishing with small and light lures. Feel every bite, no matter how fine, and present your lures with the best possible lure control.

Exciting casting distances: Achieve incredible distances and place your lures with millimetre precision with the excellent casting dynamics of this rod. You can reach even the most remote hotspots with ease.

FUJI components for smooth performance: High-quality FUJI KL / KT SIC guides and the lacquered FUJI TVS reel seat guarantee a secure hold for your reel and round off the elegant design.

Ergonomic comfort for long fishing sessions: The ergonomic EVA 'split' rear handle with aluminium end cap offers you maximum comfort and a firm grip even after hours of casting.

The Magnific Finesse RS-2 is your upgrade to a finesse fishing pro!

QUICKTIPS POWERFISHING

Perch love speed! Late summer and autumn are prime times to go after the striped predators with fast-moving lures — catching both quantity and quality. Beyond the fun factor, speed is tactically efficient because it allows you to cover more water and learn about fish behavior quickly. One particularly powerful and versatile method is fishing with chatterbaits, which we explain with our Quicktips.

Variation Beats Steady Retrieve

Chatterbaits already work their magic with a steady retrieve and perform reliably at high speed. Still, take advantage of their potential by experimenting with retrieve styles and speeds. For example, after several meters of full-speed retrieve, a sudden pause can give followers a chance to strike. Likewise, a couple of quick reel turns during an otherwise steady retrieve can simulate a fleeing baitfish. When fish are near the bottom or in cover, jiggling can be the key. The skirt plays naturally, and with brief vibration bursts creates an irresistible combo.

Obstacles Are No Obstacle

Thanks to the blade and single hook, chatterbaits can be retrieved with relatively few snags and are ideal for fishing in cover. Few other lures work so effectively through weed beds, wood, and rocks. Perch love to strike as the bait pops out of gaps or structure. Bridges and docks are also great spots, as the bait can flutter down toward the bottom along the surface. A baitcaster — such as our Magnific Finesse MG - 2112 ML RS-2 (3–15 g) — is a great advantage here, allowing controlled line release, better bite detection, and stronger hooksets. And over a full day of fast-paced fishing, you save time by skipping the bail flip before every cast.

Murky Water, Clear Choice

Clear water is often considered essential for successful perch fishing. That's true to an extent, as these big-mouthed hunters have excellent vision. But in murky or cloudy conditions, their metabolism still drives them to eat — and that's where chatterbaits shine. With high-frequency vibrations, varied pulse patterns, and flashing blades, they outperform soft plastics and hardbaits when visibility is poor. In clear water, they're especially effective on overcast days with wind and waves.

Experience the perfect combination of speed, power, elegance, and absolute reliability.

The RIVAL is a high-quality predator rod series, especially developed for target fish angling—uncompromising in performance and design. Unparalleled speed and casting performance. Equipped with an extremely lightweight yet robust T1100 carbon blank from Toray, the RIVAL offers breathtaking recovery speed – for precise, long casts and pinpoint bait placement. Ideal for a wide variety of techniques and bait types. Sensitivity meets power! The fast, sensitive rod tip transmits every subtle tug and every bite – directly and without distortion.

Rival ULR

Maximum sensitivity with minimum weight and uncompromising directness – that was our goal for the ULR variants. Fast rods for hardbaits, softbaits, and microjigs for fishing in small streams for trout, chub, perch, and more.

Rival Bass

The two spin models in this series are developed to cover a wide range of bass fishing – with a special focus on power fishing, jigging, and twitching. They combine versatility with the necessary feedback and power to guide lures precisely. If you are looking for a rod that can do it all, you will find it here.

At the same time, the powerful blank provides the necessary power for uncompromising control during the fight – even with larger catches or difficult conditions. Technology and aesthetics – perfectly combined! Equipped with high-quality components such as FUJI KL/KT SIC guides for optimal line management and maximum durability, a lacquered FUJI TVS/VSS reel seat that is ergonomically shaped and visually appealing, and a comfortable split EVA handle for a secure grip in any situation, the RIVAL also impresses across the board in terms of features. The overall picture is rounded off by a slim, elegant design that is just as impressive on the water as it is in your hand.

Rival JIG

If you are looking for extremely agile and fast rods for boat fishing, or if you like to animate your lures with jerks, you will find your favorite rods in the JIG range. Specially developed for zander and pike fishing, these models bring every bite to your wrist like a bolt of lightning. The powerful backbone allows you to maintain the upper hand even with really big fish.

Rival Distance

Every angler is familiar with situations where long casting distances are necessary to reach the target fish. Perch, in particular, are often found on sloping edges, mussel beds, or shipping channels, outside the normal range of conventional perch rods. The Distance variants of the Rival were created precisely for this purpose. Kickback rigs and other long-cast rigs, for example, are ideal for this type of rod.

Rival Baitcast

Of course, a complete setup also includes baitcasting rods – which is why we have consistently expanded the RIVAL series. Whether twitchbaits, rubber jigs, crankbaits, chatterbaits, spinnerbaits, etc.: with the new baitcasting models from RIVAL, direct, precise, and effective lure control is guaranteed. Full control, clear feedback – exactly what you expect from a modern cast.

ROD REPORT

RIVAL BASS (YPC BANK EDITION)

The Goal

Elegant, timeless, and effective. Last year's successful rod series returns in a new look. Anyone who watched our team angler and YPC debutant Anton Holzleitner at the last tournament will have seen the performance of the Rival series firsthand. The carbon fibers of the blank had plenty to do in the Bavarian's hands along the Dutch banks.

The aim was to develop a universal predator rod that covers as many fishing techniques and species as possible with a single model — without compromise.

Careful planning, long testing phases, and numerous optimization processes enabled us to bring a top-class product with excellent value for money to the market — one that will bring you lasting enjoyment.

The Materials

Only our top components are used. The sleek black T1100 blank provides optimal recovery speed as well as maximum sensitivity and bite transmission. Accurate casts and strong hooksets are guaranteed thanks to the fast action and solid backbone. The sensitive yet not too soft tip, combined with a smooth bending curve in the upper blank section, allows perfect lure control — whether using soft plastics, metal lures, hardbaits, or other rigs.

In addition, the Rival Bank comes equipped with a Fuji reel seat, Fuji slim guides with SIC inserts, and a refined gold-colored end cap. The minimalist split Duplon handle fits perfectly in hand and emphasizes the clean, timeless design of this exceptional rod.

Use Area

With a casting weight of 4–28 g and a length of 230 cm, the Rival Bass YPC Bank is a universal tool and the ideal all-rounder from shore or boat. Both soft and hard lures can be cast and worked precisely. Thanks to the described bending curve and power reserves in the lower blank, even large fish in strong current are no problem. At the same time, the sensitive tip shines when perch fishing with finesse techniques like C-rig, free rig, or dropshot. Even the softest bites — like those in winter or tough days — are reliably transmitted.

Especially when covering long distances on foot, frequently changing spots, and searching for active fish with various techniques, it pays to travel light.

If you want to fish effectively without sacrificing enjoyment or diverse presentations, be sure to check out the new YPC Rival Bank.

JIG-XPERT

D-Hook hook eye

ergonomic reel seat

JIG-XPert: There will be no missed takes with this impressive series of rods. Designed with pike, perch and zander in mind, they cover the entire range of modern active fishing. We have created an ultimate catching machine in all casting weight classes, with real power at your wrist right from the start. The super fast JIG-XPert blank made of Japanese high-performance carbon has outstandingly good casting properties for precise presentation, even at extreme distances.

JIG-XPert Perch: There are a lot of different methods for bringing our red-finned friends to where we want them. Anyone who particularly wants to try their luck with small twitch wobblers, Carolina rigs, soft lures and the like will be on to a sure thing with the models in the Perch series. Fantastically fine sensitivity in the tip area really sets these models apart. No matter how cautious the nibble, it can be identified in a flash, and then comes the strike. The longer versions in particular feature an enormously wide range of use, and really earn the title of a true all-rounder. The ultimate tool for hunting stripy predators.

JIG-XPert Zander: No other fish is targeted more often with the jig lazy or vertical

method than the zander. Perfect contact with the bait, and that sensation of the classic 'tock' when it hits the bottom; these are the keys to success. We designed the blank for this series to be just as finely sensitive and ready to respond. The extra stiff action of the rods lets you feel every structure under the water, however small it may be, and then lets you strike precisely, even over long distances.

JIG-XPert Pike: Soft lures, wobblers, swim baits and blinkers... just some of the lures used in modern pike fishing. But not all the options can be covered by one rod, and the more specialised the lure is, the better the rod needs to be adjusted to it. Regardless of whether this involves vertical fishing or classic pike jigging, everybody will be happy with this series of rods. There's plenty of power at the tip so as to put the hook exactly in the right place. Combined with a stiff spine, it puts you in the driving seat when it comes to playing the fish. As well as that, these no-compromise power packages have top flight fittings in the form of high quality SIC guides in the KL/KT style, solid TVS or ACS reel seats, and robust split Duplon handles. Just genius!

REGERA SPIN

TORAYCA

DPS

D-Hook hook eye

When it's time to go big: This rod is built for tough opponents, big lures, aggressive bites, and uncompromising battles.

Whether using swimbaits, hardbaits, or soft lures – this series delivers the power and control you need when predator fishing gets serious.

The high-load blank combines Japanese high-performance carbon with ultra-durable aramid fibers. This results in extra power reserves, quick recovery, and powerful hooksetting force – even over distance or in strong currents. Thanks to the progressive action, pressure is evenly distributed across the entire blank, giving you the necessary control during every phase of the fight, even with exceptional fish. Stable Seaguide SIC guides withstand the strain of heavy lures and tough fights with ease. The extra strong DPS reel seat ensures your reel stays firmly in place, even under maximum load. The setup is completed with a high-quality full cork handle that not only feels great in your hand but also ensures a secure grip at all times.

Conclusion: This rod gives you exactly what you need when targeting big fish with heavy lures – uncompromising strength, technical precision, and reliable handling in every situation.

SPORTS

This small but refined rod series was developed specifically for light spinning for powerful salmonids. The ultra-sensitive blank made from Japanese high-performance carbon by Toray transmits every movement of the lure directly to the handle – ensuring outstanding lure control and an unfiltered feel.

Whether you're fishing with spinners, spoons, or wobblers – this rod allows you to present your lures precisely and effectively. The parabolic action, combined with a solid backbone, gives you ample power reserves during the fight, allowing you to cushion explosive salmon runs with confidence. Two length markers on the blank let you quickly estimate the size of your catch.

Premium features include a robust FUJI TVS reel seat, high-quality SIC guides from Seaguide, and elegant split cork handles. Naturally, this power rod also delivers uncompromising performance when targeting sea trout.

X-ACT ZANDER / PIKE

HIGH-PERFORMANCE CARBON FISH
TORAYCA

D-Hook hook eye

This rod delivers everything you need for modern zander and pike fishing: The fast, powerful blank made from Japanese high-performance carbon by Toray transmits every contact with the bottom or a fish directly – with no loss in sensitivity. The sensitive tip provides precise feedback on lure movement and bottom structure, while the stiff backbone delivers explosive hooksets – even over long distances. Whether you're using soft lures on jig heads or vertical techniques – you stay fully in control. The rod packs more than enough power to handle even the most combative fish with confidence. Extremely purist in appearance, the rod eliminates everything that doesn't contribute to performance, resulting in a pleasantly low weight – enabling hours of focused fishing for your target species. Equipment includes lightweight KL / KT SIC guides, a sturdy reel seat, and an ergonomically shaped EVA rear handle.

PREDATOR LANDING NETS

Predator landing net

Ultra-stable aluminum frame, non-slip soft handles, clever folding mechanism. Odorless, rubberized net – gentle on fish & easy to transport. Three sizes. One goal: land safely!

Monster landing net

For the really big ones.

Maximum stability, extra-large handle, super-strong rubberized net. Ideal for large pike, zander, etc. – suitable for boats and shore use. Robust. Foldable. Uncompromising.

Wading landing net

Lightweight, handy, always at the ready.

Perfect for wading: compact landing net with rubberized, fish-friendly net and sturdy carbon frame. Lightweight, handy, and always at hand thanks to hooks for attaching to waders or backpacks. Also perfect for fishing from a kayak.

Telescopic landing net

The telescopic landing net handle can be extended to the desired length – ideal for flexible use from the shore, jetty, or boat. The lightweight carbon frame and rubberized net allow for comfortable and fish-friendly handling.

STURGEON

NEW

HIGH PERFORMANCE CARBON FIBER
TORAYCA

The next-level sturgeon rod – strength, innovation, and maximum efficiency combined! This rod is built for long casts and for quickly showing sturgeon their limits. Thanks to the high-performance carbon by Toray, the blank delivers impressive casting power – strong, precise, and with maximum range. But it's not just about casting: the blank's balanced power distribution during the fight reliably cushions sudden runs, so you remain in control at all times. No matter how hard the fish fights, you'll show it who's boss.

The rod also stands out with its carefully selected components. The sturdy DPS reel seat ensures a secure hold even for large reels, while the KW / KL / KT long-cast guides enable nearly frictionless line flow – giving you bonus meters with every cast. Robust EVA split handles offer pleasant comfort and a secure hold. A special extra: the upper tip section glows at night, so you can detect every bite – even in low-light conditions. With this rod, you're perfectly equipped to target trophy sturgeon – day or night!

Fuji DPS/ACS Baitcast

Allow us to introduce a complete top-of-the-range rod series for the fish of a thousand casts. So as to present shy sea trout with different kinds of lures effectively at long range, the action of the lightweight finely-tuned blank has been especially matched for use with wobblers, blinkers and soft plastics. Thanks to the sensitive tip area, in combination with a powerful backbone, every strike connects securely and with full force. Anyone who prefers small blinkers and wobblers of between 8g and 14g will be well advised to go for the two seatrout finesse models. And for those who prefer hunting silver-barred types with Sbirolino, streamers or flies, we recommend the Sbiro version, at 3.6m in length. As well as these, two baitcast models and an ultra-light variant are also available. The top of the range fittings for the Seatrout Xpert include resilient K-Style SIC guides, a robust FUJI DPS/ACS reel seat and a high quality Duplon handle.

REVOLT CS-2

With the second generation of the REVOLT Carp series, you get a modern, powerful carp rod that combines performance, precision, and style in one strong overall package.

The innovative, seven-sided Heptacore blank made from T800 carbon material by Toray is the heart of this rod and makes it something special. The heptagonal blank structure allows for optimal loading and pinpoint casting with maximum control. Thanks to the balanced rod action and fast recovery, you can achieve long distances with minimal effort – even under tough conditions. The proven KW guide setup with high-quality SIC inserts ensures optimal line flow with minimal friction. The large starting guides (50mm on 12ft/13ft models, 40mm on 10ft models) show their full potential especially during long-distance casting. A stylishly painted FUJI TVS reel seat not only guarantees a firm hold for your reel but also offers optimal comfort while casting due to its ergonomic design. The ergonomically shaped split EVA handle lies comfortably in your hand and ensures comfortable handling and a secure grip.

The entire package is rounded off with a modern, elegant design that combines uncompromising functionality with timeless aesthetics.

The REVOLT Carp is your reliable companion for demanding sessions and big carp.

ESCALADE CARP

More acceleration, more casting distance, more precision: this exclusive carp rod series sets new standards! Ultimate power comes from our heptagonal Heptacore blank, optimised with T1100 carbon fibres. Added to this are high-quality KW/KL guides with SIC inlay. In order to give even more dynamic power to the tip area, extremely light single-leg guides are used, apart from the 50mm start guide and the lowermost guide, both of which have a double leg. And to achieve the optimum balance between rod and reel, we use a DPS double hood reel seat from FUJI. This allows the centre of balance of the reel to be moved forwards or towards the rear, which adds a few additional metres when casting. In short, this is absolutely the last word for everyone who wants to fish at a distance but still be right on target. Just try it out, and be ready to be seduced.

BEYOND CARP CS-2

Curtain up for the 2nd generation of the BEYOND Carp series!

The innovative, heptacore blank made of T1100 high-performance carbon fibre shines with its outstanding stability and performance. The BEYOND rods are characterised by excellent damping and accurate casting properties.

Thanks to the special blank design, you can reach significantly greater distances with considerably less effort.

To further increase the tensile strength and power during the fight, the handle section has been reinforced with a special carbon mesh. High-quality FUJI KW SIC guides with starting guide size 50 for the 12ft. & 13ft. variants and size 40 for the 10ft. Variants allow the line to glide through smoothly. A specially designed aluminium DPS reel seat with FUJI Double-Hoods guarantee a firm hold of the reel. This also allows the reel's centre of gravity to be shifted slightly forwards or backwards for even better balance.

The carbon design split handles not only offer an elegant look, but also a good grip when casting. With this high-end carp rod, you are ideally equipped to manoeuvre large carp safely out of the underwater jungle.

Experience the perfect blend of power, precision and style.

Helicore® Blank

TORAYCA

Titanium KW SIC

ALPS carbon reel seat

This carp rod series combines cutting-edge materials with technical finesse and a design that convinces all around.

The foundation of the blank is the high-strength T800 carbon material from Toray – known for its extreme durability, excellent recovery, and total reliability even under the toughest conditions. The result: rapid acceleration, razor-sharp precision, and casting behavior that sets standards in this class. Thanks to its fast action and superb recovery properties, the blank is always ready to transfer full energy into the cast – fast, direct, and without delay.

The built-in titanium KW rod guides from Seaguide (50mm starting guide for 12ft/13ft models, 40mm for 10ft) ensure smooth, line-friendly guidance at minimal weight. Even under high stress, they show no weakness – a clear advantage when you're fishing at extreme range.

In combination with the carbon reel seat from ALPS, this creates a consistently high-quality setup – stable, lightweight, and uncompromisingly functional. The grip is also no compromise: the slim, full-length EVA handle feels great in the hand and offers secure hold in any weather.

These rods deliver the performance that modern carp anglers demand – in a look that blends understated style with high-end substance.

COMPETITION CS-5

CARP RODS FOR EVERY SITUATION!

Use our Competition Carp CS-5 rods to discover the world of carp fishing thanks to their exceptional combination of speed, resistance and impressive damping properties. The semi-parabolic blank made of Japanese high-performance carbon is fast, and at the same time incredibly tough. You will always have the upper hand when playing even energetic fish. The fast and strong backbones of these rods also allow you to make really precise casts, regardless of whether you are seeking distance or want to cast precisely onto a chosen spot. As well as their

impressive performance, the Competition CS-5 series also feature modern aesthetics and come with top-of-the-range fittings including tough SIC guides in KW style (start guide size 50 / with 10ft Stalker / 10ft Breakout size 40), TVS style reel seats and EVA split handle.

COMPETITION CS-5 CARP MINIMA

Competition CS-5 Carp Minima

The Competition Minima series has the same blank and the same action as the Competition CS-5 Carp. In the Minima version, only the conventional KW guides have been replaced by elegant, slim and particularly lightweight 'Minima' KW guides in a matt black colour from American Tackle.

In addition to the visual enhancement, this also gives the rods a small improvement in the acceleration values when casting.

SPECIMEN CS-2

HIGH PERFORMANCE CARBON FIBER
TORAYCA

Fuji reel seat

With this rod, you get performance you can rely on in every situation. The high-quality blank made from Japanese high-performance carbon by Toray impresses with its pronounced speed, precise feedback, and remarkable stability under full load. Thanks to the well-thought-out blank construction, long, targeted casts can be mastered with ease even under difficult conditions – whether at large natural lakes or fast-flowing rivers.

The equipment is on par with its performance: robust KW SIC guides guide the line evenly through the cast thanks to their special geometry – even under heavy tension, the flow remains smooth and stable. The proven FUJI DPS reel seat guarantees a secure fit for even heavy reels – robust, durable, and functional.

For optimal grip, a slim, ergonomic split EVA rear handle ensures a secure hold, even when wet. Optional for the 12ft 3.00lbs and 3.25lbs models: elegant full cork handle with classic character – for anglers with both taste and high expectations.

These rods combine precise action, high-quality fittings, and versatile usability – a strong partner for those who want more than just standard.

CARPY

HIGH PERFORMANCE CARBON FIBER
TORAYCA

Fuji reel seat

Born from countless nights spent by the water. Shaped by experience. Fine-tuned down to the last detail. A match that was simply perfect: SPORTEX X CARPY. Together with Peter, Maurice, and Marian, we have spent the last few months developing a carp rod that delivers exactly what matters out there – maximum flexibility and uncompromising reliability.

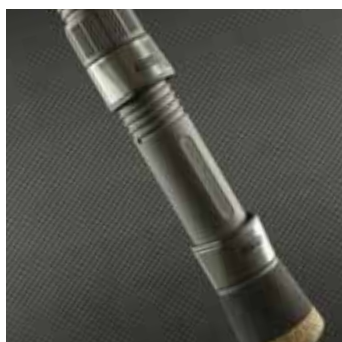

Whether casting from a distance or from a boat: with two different tip options – 11 ft / 2.75 lb and 12 ft / 3.5 lb – the rod adapts to any fishing situation. Powerful in the backbone, sensitive in the tip – a true all-rounder with character.

Technically, it impresses across the board: The FUJI DPS reel seat securely holds any reel, while the Seaguide Minima guides ensure a sleek, modern setup. Of course, it wouldn't be complete without the legendary "trumpet" known from the podcast – for a secure grip even during long drills. The whole rod finishes off with a classic shrink tube handle. SPORTEX X CARPY – Simply awesome carp fishing!

TRIUMPH CONTEST

HIGH PERFORMANCE CARBON FIBER
TORAYCA

Carbon double hood
reel seat

When every centimeter counts, maximum casting performance is required. The TRIUMPH Contest was specially developed for anglers who push their limits – whether during daily fishing or in international casting competitions. It's your tool for record distances, designed for maximum performance under competitive conditions. The blank is made from Japanese high-performance carbon by Toray and is fully geared towards long-distance casting. The extremely stiff backbone construction ensures an explosive release during casting, while the tuned tip action provides precise cushioning during the fight – ensuring the hook stays firmly in the fish's mouth, even with powerful fighters. Especially notable is the minimal oscillation after casting – even during power casts with full body movement, the blank returns to its starting position in a split second. The result: direct, loss-free power transmission and a clearly noticeable increase in control and range.

Thanks to the stable KW SIC distance casting guides (50mm starting guide), the line glides smoothly through the guides with minimal resistance. The carbon reel seat with dual hood system ensures a firm reel fit and enables optimal balance for long, powerful casts.

A robust, ergonomically shaped split EVA handle completes the package and gives you the control you need, even during the most powerful casts.

Conclusion: This rod is no compromise – it's a statement. For anyone who wants to go further than the rest.

TOURON CARP

The Touron Carp Series are four-piece rods ideal for carrying in a backpack or a small case. But despite the multiple sections, there really is nothing to differentiate between their action and that of a two-piece rod. They have comparable casting and damping properties, and they also have plenty of power reserves in the spine. Another special feature is that you can fish the Touron Carp in two different lengths. The 12ft model, if the last part but one is removed, can also be used as a 9ft stalker/boat rod.

The 13ft model can be used as a 10ft version. It means you have two rods in one. The rods have slim SIC guides from Seaguide (butt guide size 50), a full EVA handle and FUJI DPS reel seat.

ADVANCER CS-3

HIGH PERFORMANCE CARBON FIBER
TORAYCA

The Advancer Carp CS-3 delivers what many promise: a lot of rod for a very fair price. Equipped with a powerful blank made from Japanese high-performance carbon by Toray, it delivers clean casting performance and reliable cushioning during the fight. Ideal for anyone looking for a lot of rod at a fair price. Durable SIC guides protect your line and enable excellent casting distances, while the proven TVS reel seat ensures a secure hold for all common carp reels. This makes the rod technically rock solid and ready for any challenge by the water.

Visually, the CS-3 also impresses with a clear design: entirely black, finished with a stylish 1K carbon look – sleek, modern, and uncompromisingly functional. Whether you're just starting out or looking for a reliable second rod: The Advancer Carp CS-3 delivers reliable performance without breaking the budget. Day after day, bite after bite.

CATAPULT CS-4

Take what's good and make it even better. That was what we were aiming for when we updated the successful Catapult series. To make sure the modified rods took best advantage of their predecessors' classic strengths, in particular when it comes to casting performance, we decided on a blank made of Japanese high-performance carbon, with a semi-parabolic action. Thanks to the combination of high-quality SIC guides, robust FUJI DPS reel seats, and solid split handle handles, the Catapult Carp CS-4 models have outstandingly good casting and loading properties. And, best of all, because slight errors in technique are compensated for by the excellent material, even inexperienced casters can achieve impressive results. In short, an all-round no-nonsense package which, thanks to its handle section being reinforced with spiral carbon, can overpower any carp

Experience the ultimate in carp fishing performance with our revolutionary Purista CGC. Developed for carp anglers who are looking for both speed and dynamism, this rod sets new standards when it comes to performance and casting distance. The enormously fast action makes it easy to cast precisely and powerfully over long distances. The special laying of the carbon fibres at a 45° angle means that the blank has even higher tensile strength, while the extra light and tough carbon guides keep weight down and improve the snaking behaviour of the blank. The slim full Duplon handle sits perfectly in the hand when casting and provides a comfortable and firm grip when playing the fish.

CARP LANDING NETS

Carp landing net 42" „Complete“

Strong 42" carp landing net with high modulus carbon arms incl. floating devices. The supple and deep landing net protects the fish. The 6ft long carbon handle finished with 3k carbon mesh comes with a robust net block made from cast aluminium. Additionally, we offer the complete carp landing net with an olive, rubberized net.

Premium landing net handle

This elegant landing net handle is especially developed for discerning carp anglers who value design, stability, and handling. Made from high-quality carbon, the handle offers the perfect balance of stiffness and flexibility—for absolute control when landing large fish or feeding with screw-on feed scoops. The sophisticated design ensures optimal power transmission, while the non-slip shrink tube handle guarantees a secure grip – even in wet conditions. Compatible with standard landing net heads, this pole impresses with its sporty, elegant design and high-quality workmanship.

QUICKTIPS

SPRING TROUT FISHING

The nights are gradually getting shorter, the days longer. Life in and around the water is picking up again. The most interesting time for trout is coming. April and May are excellent months to go after the spotted hunters with a spinning rod. Vegetation on the banks isn't too dense yet, allowing us to place our lures where dense summer growth would make it impossible. At the same time, there's not yet an oversupply of food, and there's enough oxygen in the water. Perfect conditions for creek stalking. Anyone who keeps a few things in mind now can experience truly magical moments and outwit the occasional dream fish.

1. Undercover Mode

Trout — especially large specimens — are extremely shy and cautious animals that have excellent vision and can perceive vibrations and sounds from a great distance. Otherwise, they wouldn't survive in their environment. So, the first and most important rule is: 'Quiet and inconspicuous!'

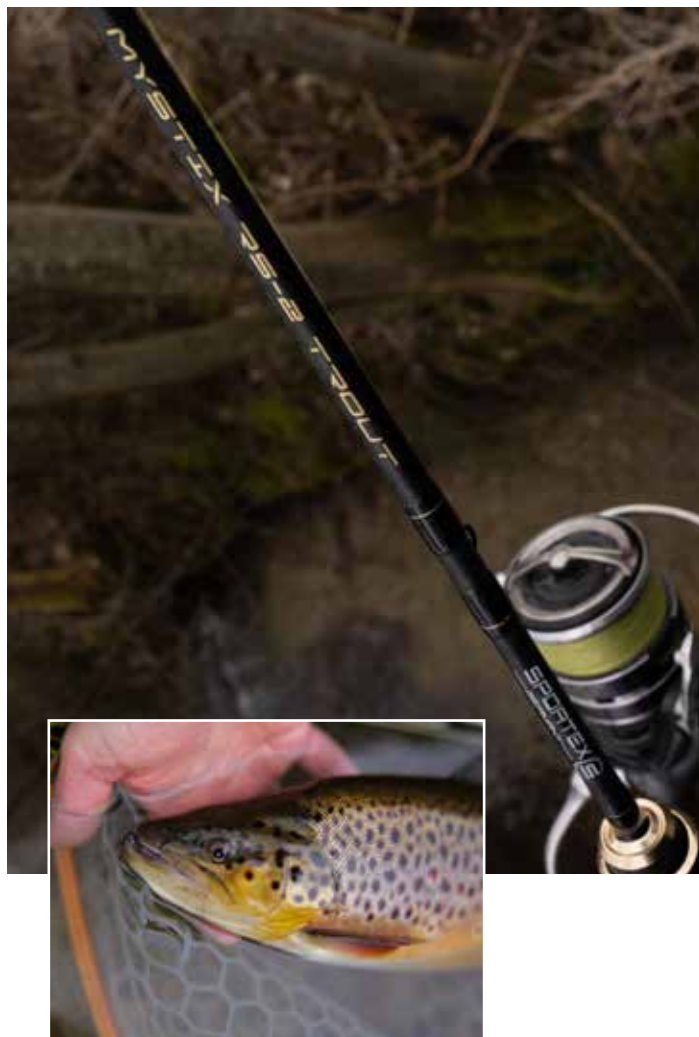

The well-known tip of walking upstream and fishing downstream should be mentioned again, even though it seems obvious. It helps avoid being detected too early, which ensures that the fish are still in place when we present our bait. It's also important to walk softly, stay well back from the bank, and ideally keep a slightly crouched posture. As you approach a promising section or bend, stop and try to see from a distance if a fish is already visible nearby.

As close as necessary, as far away as possible. A pair of polarized glasses is essential in this context — not only to spot fish in time, but also to observe how they react to the lure and adjust accordingly. Stay undercover and cast several meters beyond the trout so that it doesn't hear the lure hitting the water but sees it coming from a distance and passing by.

2. Fine Tuning

Particular attention should be paid to the gear — especially the rod. On one hand, the blank needs to be fast and precise enough to cast small lures accurately. On the other hand, due to the soft mouth and leaping behavior of salmonids, a parabolic action is essential. Trout tend to make fast runs and aerial moves to throw the hook. A smooth bending curve helps prevent losses and also makes the fight more enjoyable. Depending on water width and vegetation, rod lengths between 1.60 m and 2.40 m are ideal. The "Mystix Trout RS-2" series from Sportex combines all these features and offers the perfect gear for (stream) trout fishing. A small 1000 to 2500 size spinning reel (depending on the brand), spooled with high-quality monofilament of 0.18 to 0.22 mm, completes the setup. If there are many obstacles like wood, branches, or plants in the water, a thin braided line (with around 3–4 kg breaking strength) is better. In that case, a generously sized fluorocarbon leader of 1.5 to 2.5 m is essential for abrasion resistance and low visibility. It's important that all components are well matched, and — especially when using braid — the drag must not be set too tight. That ensures you're safe, especially during the fish's sprints.

3. Right Lure in the Right Place

Hungry trout aren't picky. However, in early spring, they can still behave cautiously. It's worth experimenting with size extremes. Small lures between 2 and 5 cm can outperform larger ones on cold or tough days.

They're also attractive to smaller fish, which gives us an idea of the stock density and bite activity. 2-inch soft plastics with a colored jighead are my go-to when I don't know what to expect in a stream. The bright head serves as a visual focus and draws attention quickly. Even sluggish fish can sometimes be 'activated' this way. A soft plastic lure also allows you to fish all depths, which is especially key on cold days when trout are stuck to the bottom and not hunting in upper layers.

Of course, hardbaits, spinners, and spoons are also worth trying. There's no one-size-fits-all formula — experimentation is key! Have fun stalking and tight lines!

MYSTIX TROUT RS-2

Our ultra-modern rod series, specially developed for demanding 'trout area' fishing. The ultra-light and powerful Helicore blank made from T1100 carbon ensures maximum sensitivity and reaction speed. This extra sensitive rod series is perfectly tuned for use with the smallest plugs, spoons and soft lures in running and still waters. Every lure movement is transmitted precisely so that you can immediately feel and react to even the finest bites. The progressive power distribution of the backbone allows even large trout to quickly reach their limits. The casting performance also leaves nothing to be desired thanks to the outstanding speed of the blank. Slim, high-standing FUJI AT - SIC guides prevent the wet line from 'sticking' to the blank. A high-quality carbon DPS reel seat with FUJI hoods ensures a secure and durable hold of the reel. This fishing rod combines innovative materials and state-of-the-art technology to offer you the best trout fishing experience.

XCLUSIVE TROUT

Trout keep hanging on there – it doesn't matter what goes in the water, float, Spirolino, small artificial lures or Hegene techniques, these top-of-the-range rods cover a wide range of modern trout fishing. The slim lightweight blank, made of Japanese high-performance carbon, is amazingly sensitive and transfers every bite directly. And thanks to the powerful spine, every fish on the hook is under control in a flash. Added to that are top-of-the-range fittings, including a 3A natural cork handle, FUJI DPS reel seats, and special extra light low-friction guides.

X-ACT TROUT RS-2

HIGH PERFORMANCE CARBON FIBER
TORAYCA

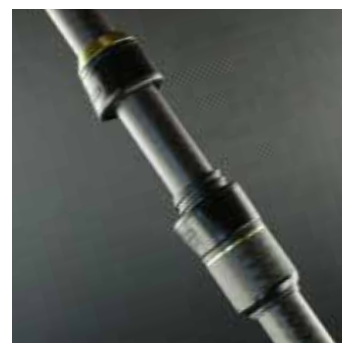

D-Hook hook eye

X-Act Trout RS-2

Developed for precise lure control and maximum response speed. This blank made from Japanese high-performance carbon by Toray delivers ultra-fast bite detection with zero delay. Minimalist in design, the rod does away with unnecessary extras and stands out for its extremely low weight. The sensitive tip transmits every movement from spoon, spinner, or wobbler & co., giving you maximum control over lure movement. When it counts, a powerful backbone is at your side – fully capable of handling even truly large fish with ease. Added features include a stable reel seat and lightweight KL / KT SIC guides – the perfect setup for demanding trout anglers!

X-Act Trout RS-2 Spoon

If you love accurate casting, ultra-fine bites, and direct feedback – this spoon rod is your perfect companion at the trout pond. This spinning rod is specially designed for small spoons and soft lures. The slim, lightweight blank made from premium Toray High Performance Carbon offers a fine, sensitive tip and a carbon mesh reinforced handle section. Ideal for presenting small spoons, softbaits or ultralight wobblers with lifelike action. The medium action of the blank cushions wild runs with ease and quickly tames even trophy trout. The ultralight design ensures perfect balance and fatigue-free fishing. High-quality components include lightweight KL / KT SIC guides that ensure excellent casting performance. Rounded off with a modern ergonomic reel seat that provides a natural grip and direct lure contact.

X-Act Trout RS-2 Sbiro

When sensitive lure guidance and maximum distance matter, this specialist rod delivers what you need: precision, sensitivity, and dynamics – tuned for modern fishing with the Sbirolino. The finely tuned blank casts your lure effortlessly over long distances, even with long leaders. The medium action allows the rod to load cleanly and lets your Sbirolino fly through the air with impressive ease. Whether slow trolling or precise spot placement, the sensitive tip action provides exact feedback on lure movement, bites, and bottom contact. The rod's excellent cushioning properties absorb strong runs during the fight. At the same time, the stable backbone provides the necessary power to control even trophy trout – perfect for long, relaxed sessions on the water!

X-ACT TROUT TREMARELLA

D-Hook hook eye

Shake and catch! These top quality ultra-balanced and super-sensitive rods were developed especially for professional Tremarella fishing in trout waters. The extremely light blank is designed in such a way that it transfers any vibrations from the handle directly from the highly sensitive tip area to the lure. The low weight of the rod makes it easy to fish for a long time. And thanks to the excellent resetting capacity, different Spirlinos can be cast with absolute precision to hit the intended target. The first-class fittings include a slip-resistant grip, robust slide reel seats made of metal, and high-resistance SIC guides, which prevent the wet line from sticking to the blank.

RAPID FEEDER RS-2

TORAYCA

D-Hook hook eye

Rapid Feeder RS-2 XS

Ready for use anywhere – even in tight or challenging spots! This compact version of our popular feeder rod series really shines at tricky fishing locations with dense vegetation or confined spaces. Thanks to its premium blank, the rods impress with excellent casting performance: your feeders land precisely and further than you might expect. They also offer the same high-end equipment as our three-piece models. If you like exploring off the beaten path, these rods will bring you lots of joy!

Rapid Feeder RS-2 Light / XS

The Rapid Feeder Light, made from premium Japanese high-performance carbon, is designed for demanding feeder anglers targeting short to medium distances in rivers and still waters. The lightning-fast backbone delivers excellent casting performance and gives you the power to land even big fish in strong current with confidence. With its durable Duplon handle, sturdy SIC guides, and a high-quality, stylishly lacquered reel seat, this rod series offers top-tier features without compromise. It also comes with three ultra-sensitive full carbon tips (1.0 / 2.0 / 3.0 oz), which register even the slightest movement.

The right choice for precise, light feeder fishing for coarse fish.

This rod combines casting accuracy, strength, and an outstanding feeder feel!

Rapid Feeder RS-2 Medium / XS

Versatile, powerful, and precise – premium rods for demanding feeder anglers!

The Rapid Feeder Medium, made from Japanese high-performance carbon, is a true all-rounder for medium-weight fishing in flowing and still waters. Its responsive blank enables impressive casting distances and smooth, enjoyable fish fighting, turning every battle with a big one into a highlight. Thanks to its thoughtful design featuring a robust Duplon handle, stable SIC guides, and a high-quality, modern reel seat, it offers comfort and reliability in all situations. The three ultra-precise full carbon tips (2.0 / 3.0 / 4.0 oz) detect even the finest bites – tailor-made for effective fishing for hard-fighting barbel, bream, and carp.

Rapid Feeder RS-2 Heavy / XS

Maximum power for big fish and maximum casting distance – the ultimate feeder rod! The Rapid Feeder Heavy was developed for serious challenges, ideally suited for heavy feeders and trophy-sized coarse fish, whether in a river or lake.

The extremely durable blank delivers powerful, long casts and lands your rig precisely on target.

With a robust Duplon handle, stable SIC guides, and a high-quality, modern lacquered reel seat, it not only offers top-of-the-line components but also a stylish design. Also included are three ultra-sensitive full carbon tips (2.0 / 3.0 / 4.0 oz), which reliably detect even the finest bites. Perfectly tuned for efficient fishing for hard-fighting coarse fish.

With this setup, you're well-equipped for your next feeder session!

Rapid Feeder RS-2 Heavy / Distance

The ultimate casting machine!

If you're after maximum casting power, this rod delivers the performance you need. The Rapid Feeder Heavy Distance gets your bait exactly where the big fish are waiting. Thanks to its powerful blank, you can easily reach long distances and place your bait on spots that few other anglers can access. The completely redesigned models offer the same robust features as our Heavy Feeder versions, with one key advantage: slim SIC long-cast guides with a 40mm starting guide optimize line flow and help achieve precise placement and maximum energy transfer with every cast.

More distance, more control, more success. This rod is built for those who want to make a statement when feeder fishing at extreme range!

Rapid Pellet Feeder RS-2

Perfectly tuned for light fishing with pellet feeders in rivers and still waters – these rods offer maximum control and efficiency. The fast, ultra-sensitive blank made from Japanese high-performance carbon enables impressive casting distances and reliable hooksets.

Thanks to its excellent cushioning properties, hooked fish stay securely on the line – even during sudden runs or powerful headshakes. Equipped with durable SIC guides, a robust DPS reel seat, and a modern EVA rear handle, this series offers uncompromising quality for demanding coarse anglers. The 10-foot version is specifically optimized for shorter distances and allows for fast reaction times at close range.

In short: Maximum efficiency for successful feeder fishing.

Rapid Match RS-2

Whether for bream, roach, or carp in still water: this match rod is more than just a means to an end – it's your extended arm on the water. Designed for pinpoint float fishing for coarse fish, it combines sporty performance with ultra-sensitive tip action. The dynamic blank made from Japanese high-performance carbon offers the perfect combination of feedback, speed, and power. The agile handle section loads cleanly and casts floats & co. precisely to the feeding spot – and holds firm during the fight. Thanks to elevated KL / KT SIC guides, everything runs smoothly even with wet lines – no annoying sticking. Perfect for delicate coarse fishing. Also a top tip at trout ponds.

Rapid Pellet Waggler RS-2

Top rods for pellet waggler fishing – precise, fast, and uncompromisingly effective. The blank made from Japanese high-performance carbon impresses with a progressive, through-action that allows you to control the fish securely and directly. The responsive tip section ensures your strike hits home even at a distance. Thanks to the blank's dynamic recovery, your waggler achieves impressive distances. Optimized damping characteristics minimize the risk of losing fish during the fight, while the robust SIC guides and sturdy DPS reel seat guarantee maximum reliability. The slightly shortened EVA rear handle fits perfectly in the hand and supports dynamic casting.

A true must-have for coarse anglers who want perfection in casting and absolute control in the fight.

XCLUSIVE FEEDER RS-2

Xclusive Feeder RS-2: Introducing the XCLUSIVE FEEDER RS-2 series, now equipped with an upgraded Helicore blank crafted from the latest T800-carbon fibres for more speed and durability. The rods are light and well balanced, which makes for very precise and long casts. In particular, the Heavy model now has extra large KW style guides to help push your casts over even further distances. And check out the ergonomic handle shape, which ensures comfortable and secure handling.

Xclusive Feeder RS-2 Light / XS: Designed for light feeder fishing over short and medium distances, these high-quality rods make going after non-predatory fish an absolute pleasure. Whether it's just a gentle nibble or an energetic attack, you won't miss a bite. They are also ideal for fishing with small bait fish for zander. The set includes three sensitive carbon feeder tips in 1.0 / 2.0 / 3.0oz.

Xclusive Feeder RS-2 Medium Light: Ideally suited for light to medium sized feeders over short and medium distances in still and flowing water. The rods perform particularly well when used for roach, bream, tench, and medium-sized carp. The set includes three sensitive carbon feeder tips in 2.0 / 3.0 / 4.0oz.

Enjoy the ultimate fishing experience with our latest Xclusive Float XT series, developed for those demanding anglers who are looking for a rod with maximum acceleration and strength and extraordinary sensitivity. This series of rods is setting new standards in the world of float fishing. The speed of the blank allows for precise casts over enormous distances, which means you can pitch the bait exactly where you want it. The unique acceleration properties mean you can get a fast strike as soon as a fish nibbles, guaranteeing you have precise control when playing. Thanks to its impressive power, this rod can bring even bigger fish onto the scales. As well as their impressive characteristics, the rods in this series also feature a modern eye-catching design.

The high-quality materials and craftsmanship deliver exquisite handling and good looks. Regardless of whether you're an experienced angler or just starting out on your fishing career, these float rods will be all the inspiration you need.

Catfire CS-2 Vertical:

Developed especially for vertical fishing for catfish from a boat, this is a rod with the power to bring fish to the surface quickly and consistently. The sensitive tip reliably detects even a hesitant nibble and allows the catfish to suck in the bait without resistance. Thanks to its light weight, the rod sits easily in the hand, meaning comfortable fishing over lengthy periods of time.

Catfire CS-2 Boat:

Tailor-made for drift fishing from a boat. This rod is bound to impress, with a sensitive but tough tip that allows for precise bait presentation under water. The reinforced backbone ensures a secure strike and full control during playing. The improved damping properties of the blank also noticeably contribute to fewer getaways.

Catfire CS-2 Spin:

These are tough and fast rods created to land catfish with lures. With a taut backbone for heavy loading, you can make precise long casts and know you have the support you need to bring the fish to the surface under total control.

Catfire CS-2 Boat Float:

A lightweight but very tough rod for trolling natural bait with a float behind the boat. The blank has impressive shock absorbing properties and a strong backbone, which, if required, prevents the fish from becoming snagged in an obstacle. The Boat Float provides a real adrenalin kick when catching catfish big and small.

Catfire CS-2 Feeder:

Presenting the new generation of the much beloved catfish feeder rod, which we have developed in conjunction with our catfish expert, Jens Köller, especially for bottom fishing with natural baits and pellets. In order to achieve even more power and impressive casting distances, we have added more reinforcement to the backbone of the rods. This improvement gives the rods even more speed strength. We have also reviewed the two changeover tips: The Medium-Heavy tip section, for use in stillwater, and the Heavy tip section, which was developed for use strong currents – both now also have added speed strength giving you the perfect solution for every situation.

Catfire CS-2 Lure Boat:

Discover our unbelievably versatile Lure Boat rod. Regardless of whether you want to fish from a boat, belly-boat, or kayak, or whether you opt for the banks of small rivers, canals or lakes, the Lure Boat can be used for a whole range of different techniques. It is best suited for use with blinkers, crankbaits, soft plastic baits and jigs. It can reach longer distances too, as well as being suitable for vertical fishing (such as for pelagic fish with a clonk teaser in combination with worms).

Catfire CS-2 Boje:

Experience the ultimate in float fishing in rivers and lakes with our special Catfire Boje float model. With its impressive length of up to 3.30 metres and its taut action, it allows for effortless casting of the line over long distances, without disturbing the surface of the water. It means for any bite you'll have a rapid and direct contact with the fish. The sensitive tip reliably conveys every nibble to the rod, while the strong backbone ensures that the hook is placed perfectly at the strike, and you can then bring the fish steadily and rapidly onto land or into the boat. If you prefer fishing from an anchored boat, our 2.70 metre version is the ideal choice. It offers you the optimum length and flexibility to maximise your chances of a catch.

Catfire Transform 3-pcs.:

A real all-rounder, which will enthrall every modern catfish angler. Thanks to its innovative design, this revolutionary catfish rod can be used in two or three parts. For example, you can combine all three parts, and use an impressive length of 3.20 metres from the bank. On the other hand, you can also use it as a two-part boat rod, at 2.70 metres long and ideal for use in open water. This rod offers you an incredible amount of practicality and flexibility on the water – take advantage!

TOP CAT CS-2

HIGH-PERFORMANCE CARBON FIBER
TORAY

Fuji R/S

TOP Cat CS-2 Spin

When spinning for catfish gets serious, every detail counts – and that's exactly where the new Cat Spin comes in.

It offers everything required for modern catfish fishing with artificial lures and takes things up another notch in the latest generation. Based on the proven predecessor model, the blank has been purposefully further developed: the newly developed Japanese high-performance carbon by Toray impresses with improved recovery and even more direct action. That means: powerful, accurate long-distance casts, with precise lure control at the same time. Whether you're using soft lures, spoons, or wobblers – this rod gets the lure to where the fish are. At the same time, the rod remains fully in control during the fight with a trophy fish, thanks to optimized power distribution and a reinforced butt section with state-of-the-art carbon mesh fabric.

Proven features like the high-quality SIC KW long-cast guides in anti-tangle design and a comfortable, non-slip handle ensure maximum control in every situation.

Conclusion: This rod is built for active catfish anglers who accept no compromises. Powerful, sensitive, and absolutely reliable.

TOP Cat CS-2 Vertical

When vertical fishing for catfish gets up close and personal, you need a tool that lets you feel every movement. That's exactly what the TOP CAT Vertical was designed for. The revised blank made from newly developed Japanese high-performance carbon by Toray offers even finer feedback, improved power transmission, and noticeably more direct action. This allows the lure to stay precisely in control on the bottom and makes it easier for the fish to suck in the lure. The powerful backbone with carbon mesh reinforcement ensures uncompromising hooksets and immediately takes over control during the fight.

The TOP CAT Vertical comes in two versions:

- One model with robust guides exclusively for use with multiplier reels, optimized for maximum load under vertical strain.
- The second version is equipped with KW SIC guides, whose stable frame and heat-resistant inserts ensure consistent performance even under high pressure and long use, and allow for flexible use with both spinning and multiplier reels. The package is rounded off by an ergonomically shaped, non-slip EVA handle that guarantees a secure hold during the fight.

Conclusion: The new Cat Vertical delivers precise lure control, the finest bite detection, and uncompromising power. A true powerhouse for catfish hunters who like it precise.

TOP Cat CS-2 Boje

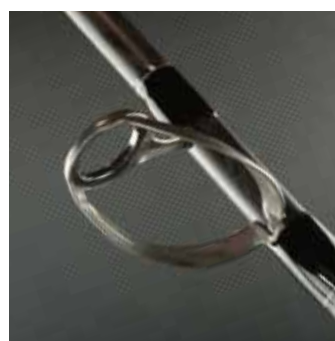

The TOP CAT Boje has been specifically redeveloped for stationary fishing with buoys. The newly designed blank made from Japanese high-performance carbon by Toray impresses with noticeably improved feedback and targeted power distribution. This allows you to reliably keep the line out of the water thanks to the firm tip action – for direct contact and uncompromising hooksets when the fish bites. During the fight, the reinforced backbone with integrated carbon mesh fabric shows its strengths: it builds massive pressure quickly, allowing you to steer even large catfish safely away from obstacles.

The buoy rods are universally compatible, whether with spinning or multiplier reels, and feature robust SIC guides, high stability, and an ergonomically shaped handle for the best hold in every situation.

TOP Cat CS-2 Boat:

When things get serious under the boat, you need a rod that leaves nothing to chance. This is exactly where the TOP CAT Boat shows what it was made for. The newly tuned blank made from Japanese high-performance carbon by Toray impresses with a more sensitive tip action and optimized feedback. Ideal for presenting lures precisely and detecting even cautious bites immediately. During the fight, the powerful backbone with integrated carbon mesh reinforcement seamlessly takes over. It provides progressive power delivery and allows you to keep the fish away from obstacles quickly – even at short range right under the boat. Thanks to robust KW SIC guides and the sturdy FUJI DPS reel seat, the rod can be used flexibly with either spinning or multiplier reels. Combined with the ergonomically shaped, non-slip handle, the TOP CAT Boat is a reliable workhorse for every onboard situation.

Conclusion: Compact, uncompromising, and battle-ready – ideal for modern catfish fishing from the boat.

The catfish version of the Jolokia is ideal for modern catfish fishing with vertical rods, lures, buoys, or pellets.

Jolokia Cat Vertical:

With a length of 1.75 m, it offers the perfect action for fishing with fireballs, clonk teasers, and bait fish. Sensitive tip, large power reserve, and short handle (25 cm), it is also suitable for belly boats.

Jolokia Cat Spin:

The Jolokia Cat Spin is easy to handle and extremely powerful when fighting fish. It is particularly suitable for fishing from the shore. Sensitive tip, good power reserve, the handle and guides are suitable for long-distance fishing.

Jolokia Cat Boat:

Two versatile rods suitable for fishing from a boat (drift, buoy) or from the shore (pellets, underwater floats). Sensitive tip, good power reserve, handle and guides also suitable for fishing from the shore.

Jolokia Cat Boje:

A powerful rod for heavy fishing (buoy, underwater floats, etc.). Large power reserve for powerful fights and long-distance fishing. Extremely stable & robust guides and reel seat.

In this extensive series, everyone should find their favourite rod for fishing in the world's oceans. Our rods are specially designed for discerning anglers who value the highest quality, reliability and optimum performance. Whether you are an experienced professional or an enthusiastic amateur angler, the Magnus Mastergrade series offers the perfect combination of state-of-the-art technology, the best materials and attractive design to take your fishing experience to a new level. We have used only the highest quality materials for the entire Magnus Mastergrade series:

- Lightweight and powerful Helicore blank made from high-performance carbon for optimum sensitivity and robustness
- FUJI Stainless KW SIC guides for long-lasting performance and reduced friction. Specially protected against corrosion from salt water!
- FUJI quality DPS or TCS reel seat for a secure hold of the reel
- High-quality, saltwater-resistant Duplon handle with logo 'branding' for maximum comfort and grip
- Rubber gimbal with cross end for stability and easy handling
- SEAGUIDE D-Hook hook holder for easy and secure hook attachment

Mastergrade GT Popper:

The rod series for targeting Giant Trevally (GT) with heavy poppers offers outstanding performance and reliability. The rods have a robust tip, which is crucial for effectively guiding and animating large poppers. They also enable long casts with ease. Thanks to the special construction, the MASTERGRADE GT POPPER offers a powerful and consistent action under load. These rods are also characterised by their excellent spinning properties, which enable even large GTs to be landed safely and in a controlled manner.

Mastergrade Tuna Spin:

Specially developed for tuna fishing. The specially robust blank design enables precise casting of a wide variety of lures, such as metal jigs, and ensures a fast and penetrating strike. The handle section lies comfortably in the hand even when the fish are fighting hard and ensures secure control over every fish that moves into the depths. Thanks to the special uptide division, the MASTERGRADE TUNA SPIN always offers reliable performance, even under extreme conditions.

Mastergrade Shore Jig & Cast:

Specially developed shore jig & cast rod that is perfect for fishing from the bank for giant mackerel, Spanish mackerel, tuna as well as pollack, coalfish, cod ect. in the 2-8 kg range. The fast blank with its strong backbone gives the rods unrivalled dynamics and casting distance, which are indispensable when fishing from the bank. The action of the tip section of the rod has been specially adapted to the needs of shore jigging lures, which enables perfect lure control. Even the finest movements and bites are transmitted precisely to the handle area, which increases the chances of success when fishing. The rods also demonstrate their skills during the fight with their excellent damping properties and rarely let the fish off the hook.

Mastergrade Travel:

Short-sectioned (5-piece) sea spinning rod that can be fished in two different lengths.

The innovative blank offers an excellent balance between sensitivity and robustness, perfect for a variety of fishing techniques and fish species. The rod enables long, precise casts, ideal lure control and secure control of the fish during the fight. If the penultimate section is removed, the 3.00 metre version can be fished at a length of 2.40 metres. This combines two different lengths in one rod. This rod combines compact design with outstanding performance to give you unforgettable fishing experiences anywhere in the world.

Mastergrade Jigging:

The MASTERGRADE JIGGING rod series combines state-of-the-art technology with a sensitive tip and an extremely resilient backbone. Despite its robustness, the slim and lightweight blank is designed for fatigue-free fishing all day long. The finely tuned tip action ensures an excellent lure feel and enables a natural presentation in the water.

Thanks to the special uptide division of the blank, the rods offer a continuous action that utilises the full power of the blank without interruption when fighting a large fish. The light models (100 g / 150 g) are ideal for light to medium speed jigging, while the heavier versions (200 g / 250 g) are perfect for large rubber lures or medium natural baits.

This series also includes two jiggig models with spiral guides (SJ1920 / SJ1930) which maximise the power transmission and at the same time optimise the course of the line on the blank.

¹Baitcast ²Monster Jig ³Travel ⁴Spiral

Boat: Maximum power and flexibility on board! For decades the Magnus Seamaster Boat series has stood for ultimate reliability and enjoyment. Our innovative new format, with its top quality fittings, now goes a step beyond. Regardless of whether we're talking natural bait fishing for redfish, ling and tusk, or lure angling for halibut, the powerful blank can take on any fish in the sea. The top-of-the-range fittings

include special boat SIC guides, robust Seaguide reel seats and high quality Duplon handles in a stylish camo format. As well as this, all the models feature a cross-gimbal design from Pac-Bay, protected by an EVA closure cap. Thanks to the special boat rod guide arrangement, we recommend the use of a multiplier reel. For all stationary-bait fans, the MB2132 is a model with something really extra, with rod guides to match.

Jigging: Make light work of heavy duty spin fishing. This unique series of rods was developed for going after pollack, wolffish, cod, ling and halibut. All the models have sensitive tip actions, which allows for controlled lure guidance with intensive bite detection. This allows for a natural presentation in all layers of the water column. The 20lb version is perfectly set up to fish different lures or natural bait rigs of up to 300g in shallow water up to 50 metres deep. For anyone wanting to use lightweight pilker lures and natural lures up to 500g in medium

depths at around the 100 metre mark, the universal 30lb model is the best choice. The 50lb models have been developed for heavy natural bait fishing for ling or rock fish, or XXL lure fishing in strong currents or drifting in depths of up to 300 metres. The Magnus Seamaster jigging rods are fitted with a cross-gimbal from Pac-Bay, including an EVA closure cap. Because of the special lowrider guide arrangement, we recommend a multiplier reel. For those who prefer stationary-bait fishing, the best bet is to go for the 30lb MB2221 model, which was designed specifically for this purpose.

Slow Jig: Fish playing... in the best possible way. Anyone looking for a robust and reliable spinning rod for effective vertical fishing with lures weighing up to 80g or 120g will really be inspired by our Magnus Seamaster Slow Jig models. The lures

can be guided slowly or with rapid, drawing movements, whichever you want. In such situations, the highly-elastic blank really does its job even when big fish are on the line.

Spin: A fast all-rounder right from the start. These versatile spinning rods were developed especially for lure angling for halibut, cod, pollack and similar species. And of course, the compact power package is also ideally suited for lightweight pilker lures

weighing up to 160g fished from the boat, with little drift and a maximum fishing depth of 50 metres. Even herring and mackerel paternosters can be used effectively with our Magnus Seamaster spin models.

Travel (Boat / Jigging / Spin): Mega power in a mini format. Our practical short-section Magnus Seamaster Travel models are available as boat, jigging and spin versions, in different lengths, and can be stowed in ordinary luggage with no problem at all. All the rods have an almost identical action to their two-part counterparts, and produce the same top performance on the water. And of course they come delivered in a super-strong transport tube.

Dimensions transportation tube:

Proprietary Helicore technology from Sportex fuses state-of-the-art T1000 carbon fibres with a resin enriched by nano particles to create a highly-responsive, well-balanced and powerful blank.

Synoris Fly Rods effortlessly and accurately cast extreme distances -beyond the limits of other fly rods – yet giving the firm assurance that this rod still has plenty more to come. They are excellent for overhead, roll and switch casting, and will deliver dry flies as perfectly as nymphs and streamers. They will also make the toughest of strikes and play the biggest fish with ease. The exclusive blank design features a matt finish in silver-grey and is enhanced with an extra light-weight aluminium reel seat with carbon-inlay. Hard-chromed snake guides, convenient marks to align the rod sections and a classy cork handle complete the impressive aesthetics on this premium rod series.

ROD CASES

Rod bag SUPER-SAFE for 1 rigged rod

The perfect protection for your rod.

From 125 cm up to 165 cm. With Rucksack function.

Spoon bag for 2 rigged rods

Perfect protection for transporting two fully assembled spoon rods to the fishing spot. Particularly suitable for short rod grips. A padded partition in the middle prevents the rods from damaging each other. Additional padded shoulder straps make it easier to carry the bag. 115cm

Rod bag SUPER-SAFE for 2 rigged rods

Elaborate SUPER SAFE rod case with padded inner

sections. From 125 cm up to 165 cm. With Rucksack function.

ROD BAG SUPER-SAFE with 3 compartments for 3 rigged rods.

Elaborate SUPER SAFE rod case with padded inner

sections. Extra deep and wide for your BigPit Feeder- and Carp reels.

With Rucksack function in length of 8,6"; 10", 12" and 13".

Rod bag SUPER-SAFE with 3 compartments for 3 rigged or several unrigged rods.

Outstanding padded lining for total reliability. Padded shoulder

strap and high-quality zip fasteners as for all SUPER SAFE models.

With Rucksack function. From 125 cm up to 190 cm.

XXL Rod bag for 4 rigged or several unrigged rods

Three well-lined inner sections. A real safe for your

valuable rods. With Rucksack function. Length: 165 cm.

Rod bag with 2 trays for 2-4 rigged rods

The SUPER SAFE Multi-talent with 2 trays for ready rigged telescopic or

standard rods. Long outside bag for net, umbrella, etc... and 2 extra tool

Bags. With Rucksack function. From 150 cm up to 190 cm.

The perfect SUPER-SAFE rod tube

It is part of an angler's basic equipment. You cannot protect your rod in a

better way. From 150cm up to 165cm.

SUPER-SAFE rod tube for one rigged rod

The SUPER SAFE lining is padded on the inside. An integrated, special reel box facilitates the insertion of the complete assembled rod. At home, simply hang your assembled equipment by the hooks. Perfect!

From 125 cm up to 165 cm. With Rucksack function.

SUPER-SAFE hard shell bag for Carp Rods 12" & 13"

A high-end bag for your carp rods, especially designed for best possible protection of rods and reels. Both separated rod-compartments, with embedded shock resistant inner-shell, offer enough space for one rod with reel each. Inside, the bag is very well padded and each rod can be individually fixed to allow best possible protection of your rods. Even size #50 guides and large big pit reels are no problem. A long extra side pocket offers enough space for an umbrella, landing net or bank sticks. Two additional side Bags are available for your accessories.

Single sleeve for Carp Rods 12" & 13"

Our single sleeves in 12' and 13' for the safe transport of single, mounted rods. The durable outer material as well as the strong inner padding allow for an excellent protection of your rods. The reel-part was especially designed for large big pit reels. Obviously, rods with size #50 guides fit in comfortably as well. Using the karabiner at the side, several sleeves can be connected.

SUPER-SAFE Baitcast rod tube for an assembled rod

This Super-safe rod tube for an assembled bait-cast rod is the ideal choice when you need to protect a single-piece rod and reel from impact damage. The length of 2.10 m will accommodate most conventional bait cast rods.

Spinning Bags

The perfect bags for the most avid lure anglers. A high quality PVC finish, amply dimensioned overlaps and waterproof zippers reliably protect the interior from moisture in all weather conditions. The premium bag easily holds two extra-large lure boxes and offers separate pockets to tidy stow pliers, hook removal or any other accessory. The basic version (no side pockets) features a mesh pocket in front and a Velcro-strip flap for fast and easy access.

Carryall Bags

SPORTEX has designed these top-quality Carryall bags for use in all weathers. A special PVC surface material, waterproof zip fasteners and waterproof base shell make them the ideal choice for protecting your fishing accessories against the wet. Carryall Bags have a spacious, padded interior compartment and three additional outside pockets.

A padded carrying strap and two EVA carrying handles on the side make light work of carrying the bag, even when it's full.

Duffel Bag

Four additional pockets, which can be attached in any combination using the click system, enable the angler to quickly and easily adapt to the particular situation on the water. Made from highly resilient TPU material, the duffel bag is very resistant to wear, kink and tear. The material is also waterproof and weatherproof. Available in two sizes (M and L), the duffel bag comes as a basic version without the additional pockets or as a full version including the expandable pockets. The shoulder straps can be stowed away in a back pocket and additional handles quickly transform the duffel bag into a travel bag for leisure.
